

A Tradition of Excellence
Since 1955

Arrow Engine Company is proud to introduce the Very Reliable Senior compressor to our continually growing line of gas compressor products. The VRS-2 is a two-throw separable reciprocating gas compressor rated for 275 horsepower at 1800 rpm. We use the same crankshaft design as our VRC-2, which utilizes a three-throw crankshaft that eliminates cylinder offset

and allows the cylinders to run in the same plane. This state-of-the-art design greatly reduces vibration and produces the smoothest running reciprocating compressors in the industry.

VRS-2 FEATURES

- 275 hp at 1800 rpm
- 3" Stroke
- Combined rod-load capability of 20,000 lbs
- Separable distance pieces
- Babbitted crossheads
- Double-acting and steeple cylinders from 2.25" to 10" diameter
- Variable volume clearance pockets
- Premier pressurized cylinder lubrication
- Hoerbiger's latest valve design
- Carbon-filled Teflon® rings and packing
