

Tulsa Gas Technologies, Inc. is an Authorized Distributor of Oasis Valves

## Isolation Valve for CNG Storage Vessel Relief Valves

The BV706-4K6ADDN is an isolation valve for CNG storage vessel relief valves.

It is an all stainless steel bar stock serviceable valve. An anti-blowout stem design allows for high pressure operation in long term service. Fully CNC machined seats ensure minimal but even seat wear. Superior materials and finishes are used, resulting in very long valve life even in rapid repetitive cycle applications. Service kits are readily available. It is rated and safety tested at four times working pressures. Lock may be used to prevent accidental movement of handle.

Working Pressure: 6,000 psi

Burst Pressure: 24,000 psi

NPT Only
